

Bitrise to Apperian Automation

Bitrise to Apperian Automation

1.Login to Bitrise

2.Add new app

- Select WebUI
- Set the privacy to Private or Public according to your project need
- Connect your repository. Use SSH URL instead of https
- Setup repository access copy the SSH key and add it your git account and click on added SSH key in bitrise.

- Choose branch. Type your branch name
- Project build Configuration .

3. Once app added successfully

Select the app created -> Go to workflow->Create Workflow and add below steps.

- activate-ssh-key
- git-clone
- android-build
- Android Signing
- certificate-and-profile-installer
- xcode-archive@4:
- deploy-to-bitrise-io

Workflow Editor->Secrets->Configure Apperian store token

once added Above steps please added **Script** step in your workflow.

Paste the below content inside **Script** and update application name, version, version_notes
